## **HIGHLIGHTS -- FOURTH QUARTER AND FULL YEAR 1998**

- **COMMERCIAL BANK EARNINGS DECLINE IN FOURTH QUARTER**

Insured commercial banks earned \$14.9 billion in the fourth quarter, a decline of \$148 million from the third quarter, and \$379 million less than their earnings in the fourth quarter of 1997. High noninterest expenses, caused by restructuring charges at several large banks, were a major factor in the decline. The average return on assets (ROA) was 1.11 percent in the fourth quarter, down from 1.15 percent in the third quarter and 1.24 percent a year ago.

- **FULL-YEAR EARNINGS OF \$61.9 BILLION SET A NEW RECORD**

For all of 1998, industry earnings were \$2.8 billion higher than in 1997. Strong growth in noninterest income, especially fee income, helped boost industry profits. Sales of securities yielded \$1.3 billion more in gains in 1998 than in the previous year.

- **BANKS' NET INTEREST MARGINS DECLINE FOR SIXTH CONSECUTIVE YEAR**

The industry's net interest margin -- the difference between the average yield on its interest-earning assets and the average cost of funding those assets -- averaged 4.07 percent in 1998, a decline of 14 basis points from the 4.21 margin recorded in 1997. This is the sixth consecutive year that the industry's margin has declined. Banks' ability to maintain high levels of profitability has increasingly depended on growing the relative earnings contribution from fees and other noninterest income sources. In 1998, noninterest income accounted for 40.4 percent of the industry's net operating revenues (net interest income plus noninterest income); six years ago, noninterest income provided less than 33 percent of net operating revenues.

- **THRIFT INDUSTRY HAS RECORD YEAR FOR PROFITABILITY**

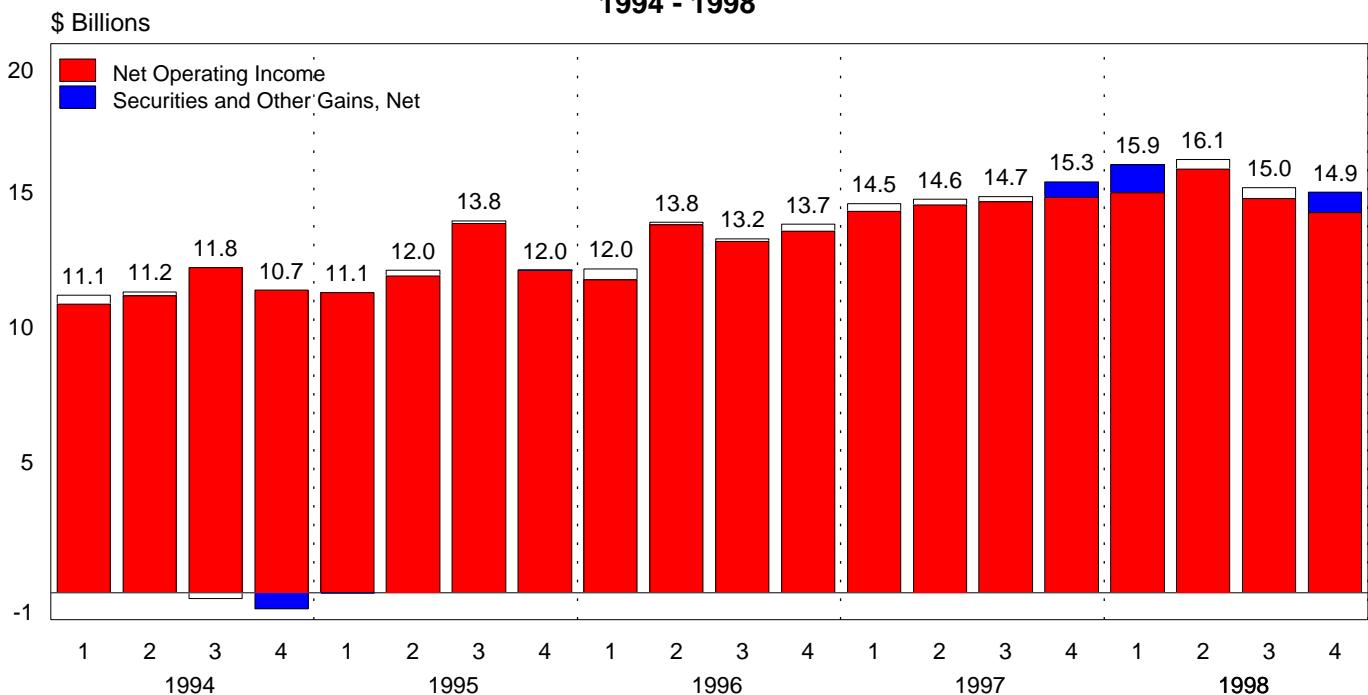

Despite a decline in earnings in the fourth quarter, insured savings institutions reported record high profits for 1998. Full-year earnings totaled \$10.2 billion, and the industry's ROA for the year rose to 1.01 percent, its highest level since 1946. A year ago, the industry earned \$8.8 billion, and posted an ROA of 0.93 percent. The improved earnings were attributable to lower expenses for credit losses, growth in interest-earning assets, and increased gains from sales of securities and other assets. Fourth-quarter earnings of \$2.0 billion were \$921 million less than in the third quarter, and \$272 million (11.8 percent) below the fourth quarter of 1997. The decline in earnings in the last quarter of the year was caused primarily by lower gains from asset sales and one-time expenses arising from a few large mergers.

- **INSURED-DEPOSIT GROWTH CAUSES BIF RESERVE TO FALL**

Insured deposits rose sharply during the fourth quarter of 1998. Total FDIC-insured deposits grew \$85 billion during the three-month period, including increases of \$75 billion in deposits insured by the Bank Insurance Fund (BIF) and \$10 billion in deposits insured by the Savings Association Insurance Fund (SAIF). This deposit growth caused the BIF reserve ratio to fall to 1.38 percent on December 31 from 1.41 percent on September 30. The SAIF reserve ratio remained at 1.39 percent. A legislative mandate to establish a SAIF Special Reserve on January 1, 1999, lowered the SAIF reserve ratio to 1.25 percent as of that date. No insured institutions failed in the fourth quarter, leaving the total number of failures for 1998 at three.

\*ROA minus ROA for the same period one year ago equals change in basis points. Basis point=1/100 of a percent.

Results for four of the states with the highest ROAs (SD, NV, DE, & NH) were significantly influenced by the presence of large credit card operations.

**Credit Risk Diversification**  
**Consumer Loans versus Loans to Commercial Borrowers**  
**(as a Percent of Total Loans)**

1989 - 1998

**Loans (\$ Billions):**

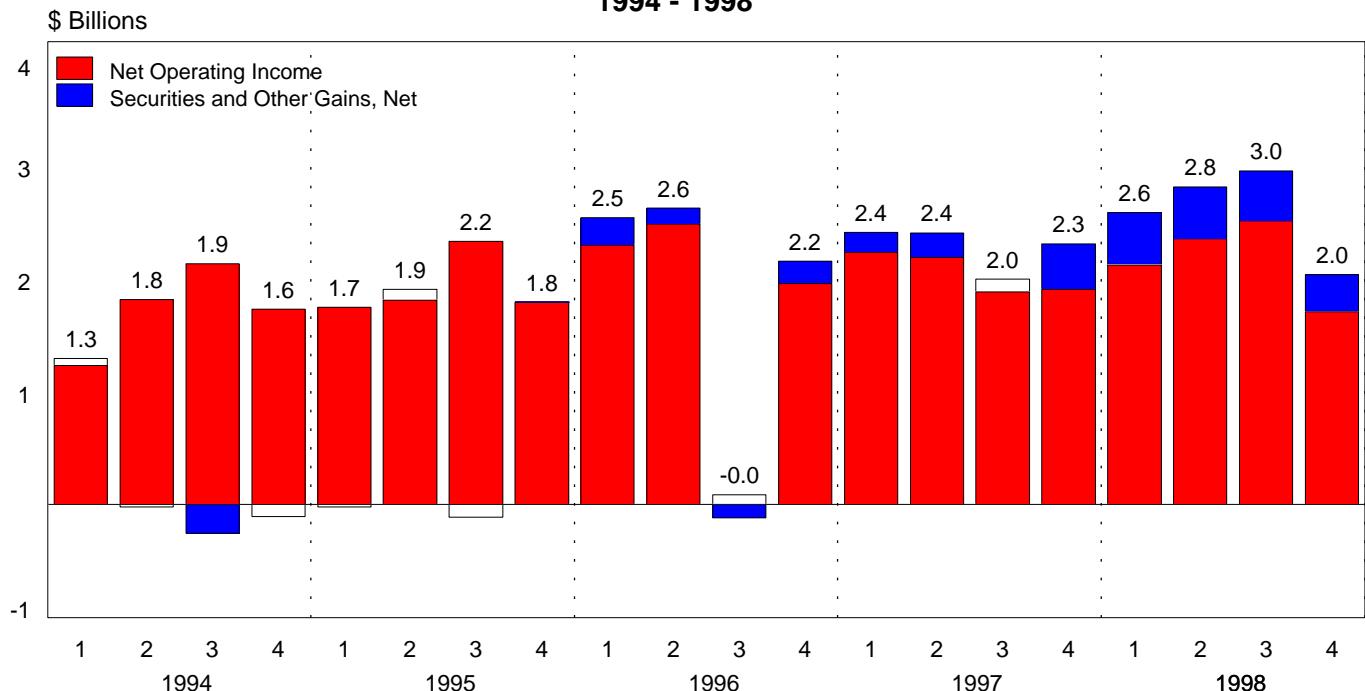

■ Commercial Borrowers	\$1,321	\$1,241	\$1,222	\$1,447	\$1,695	\$1,906
■ Consumer Loans	752	823	935	1,161	1,280	1,336

**Loans to Commercial Borrowers (Credit Risk Concentrated)** - These are loans that can have relatively large balances at risk to a single borrower. A single loan may represent a significant portion of an institution's capital or income. Therefore, a relatively small number of defaults could impair an institution's capital or income. These loans include commercial and industrial loans, commercial real estate, construction loans, and agricultural loans.

**Consumer Loans (Credit Risk Diversified)** - These are loans that typically have relatively small balances spread among a large number of borrowers. A number of defaults are likely but typically do not impair an institution's capital or income. These loans include consumer and credit card loans, 1-4 family residential mortgages and home equity loans.

## Real Estate Loan Growth Rates

1991 - 1998

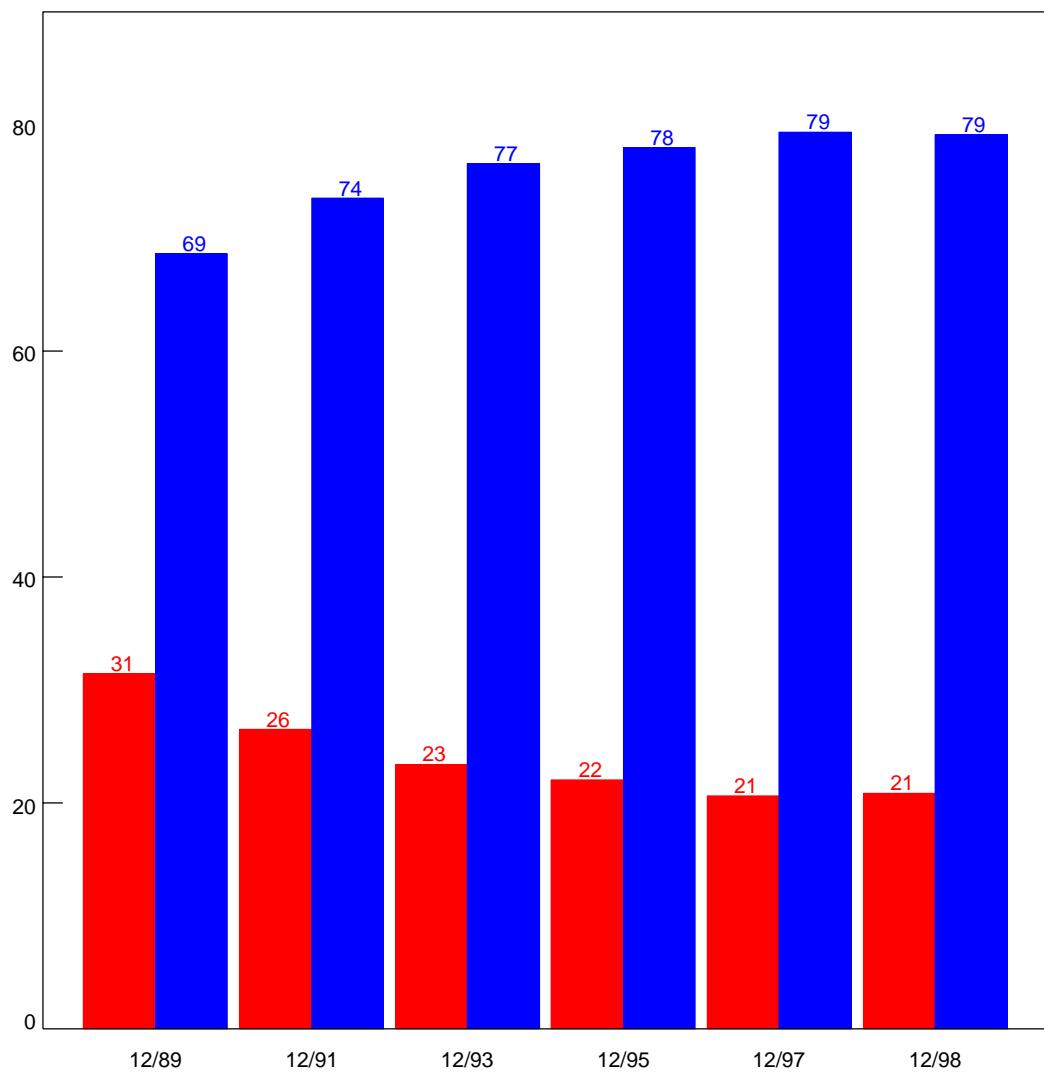

Beginning in March 1997, TFR filers report balances net of loans in process.

**Credit Risk Diversification**  
**Consumer Loans versus Loans to Commercial Borrowers**  
**(as a Percent of Total Loans)**

1989 - 1998

Percent of Loans

**Loans (\$ Billions):**

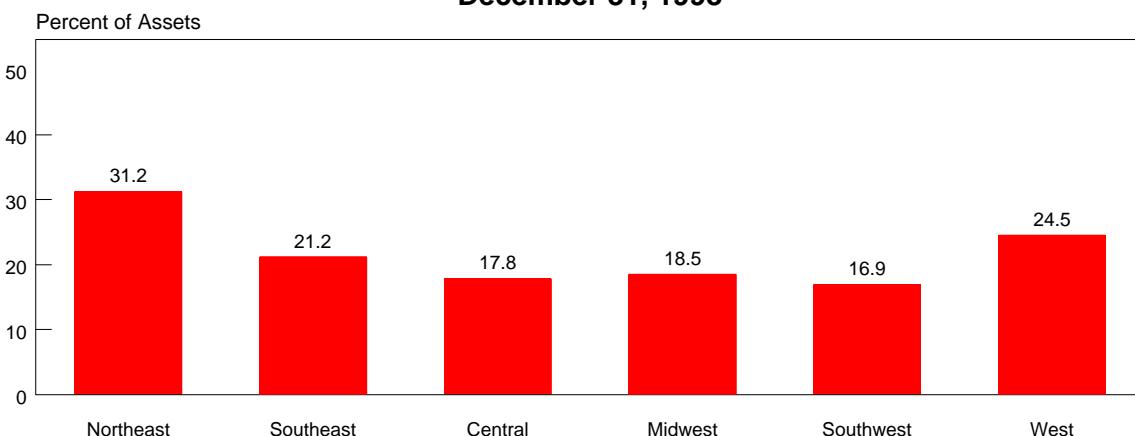

Commercial Borrowers	\$298	\$197	\$151	\$146	\$144	\$150
Consumer Loans	651	547	493	518	555	571

**Loans to Commercial Borrowers (Credit Risk Concentrated)** - These are loans that can have relatively large balances at risk to a single borrower. A single loan may represent a significant portion of an institution's capital or income. Therefore, a relatively small number of defaults could impair an institution's capital or income. These loans include commercial and industrial loans, commercial real estate, construction loans, and agricultural loans.

**Consumer Loans (Credit Risk Diversified)** - These are loans that typically have relatively small balances spread among a large number of borrowers. A number of defaults are likely but typically do not impair an institution's capital or income. These loans include consumer and credit card loans, 1-4 family residential mortgages and home equity loans.
