Return on Assets by State	

FIRST-QUARTER HIGHLIGHTS

• Bank Earnings Surpass \$14 Billion

Insured commercial banks reported net income totaling \$14.5 billion for the first quarter of 1997. This marks the first time that the industry's quarterly earnings have exceeded \$14 billion. The average annualized return on assets (ROA) for the quarter was 1.26 percent. This is the fourth-highest quarterly ROA ever reported by the industry. More than 96 percent of all banks were profitable in the first quarter, almost two-thirds (61.9 percent) reported improved earnings compared to a year earlier, and more than two-thirds (68.8 percent) had quarterly ROAs of one percent or more.

• Noninterest Income Registers Strong Growth, While Noninterest Expense Declines
Higher noninterest income was a key element in commercial banks' earnings improvement.
Total noninterest income of \$24.7 billion represented a \$2.6-billion (11.6 percent) increase
over the first quarter of 1996. Roughly half of the increase in noninterest income consisted
of higher fee income. In contrast to the rise in noninterest income, banks' noninterest
expense declined by \$136 million (0.3 percent) from the level of a year ago. In the first
quarter of 1996, banks' noninterest expense was inflated by one-time charges related to
mergers at several large banks.

• Charge-offs Continue to Rise for Credit-Card Loans

Net charge-offs of credit-card loans rose to \$2.8 billion in the first quarter, an increase of \$560 million (25.5 percent) from a year earlier. The annualized net charge-off rate on credit-card loans was 4.93 percent, the highest quarterly rate since the second quarter of 1992. In contrast to the rise in credit-card charge-offs, net charge-offs on all other loan categories declined by \$113 million. Credit-card charge-offs accounted for 68.2 percent of all net charge-offs in the first quarter. This is the ninth consecutive quarter that credit card loans have comprised a majority of banks' total net charge-offs.

• Higher Asset Yields Limit Decline in Thrift Industry Earnings

Savings institutions reported total earnings of \$2.4 billion in the first quarter of 1997, a decline of \$136 million from the first quarter of 1996. The decline in industry earnings was mainly due to lower noninterest income, which was \$129 million (6.6 percent) less than in the first quarter of 1996, when results were boosted by profits from branch sales. The industry's first-quarter ROA was 0.96 percent. This is the third-highest quarterly ROA ever reported by savings institutions. The industry's net interest margin increased on the strength of higher asset yields at larger thrifts. Net interest income was \$329 million higher than a year ago.

• Growth in the Insurance Funds Keeps Pace With Growth in Insured Deposits

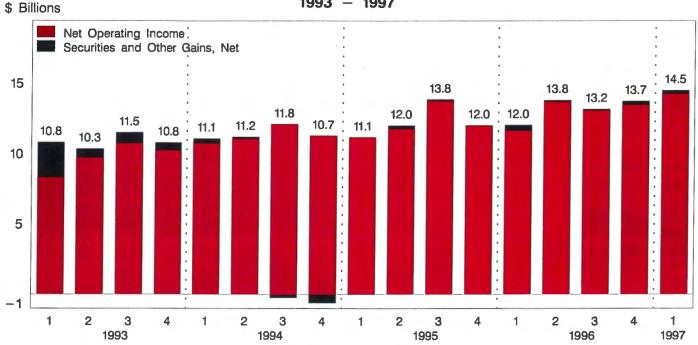

Deposits insured by the Bank Insurance Fund (BIF) increased by \$16 billion during the first quarter, despite a decline of \$8 billion in total domestic deposits held by BIF members. Deposits insured by the Savings Association Insurance Fund (SAIF) also increased during the quarter, by \$6 billion. Each fund's investment earnings, supplemented by modest assessment revenue, were sufficient to maintain reserve ratios at the prior quarter's levels. The BIF reserve ratio was unchanged at 1.34 percent of insured deposits, while the SAIF reserve ratio increased from 1.30 percent to 1.31 percent.

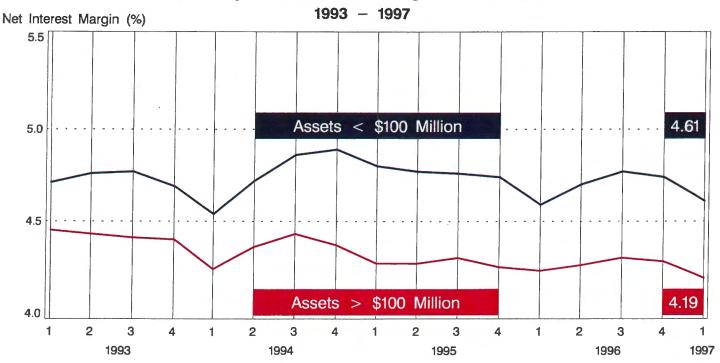

FDIC - Insured Commercial Banks

Quarterly Net Income

1993 - 1997

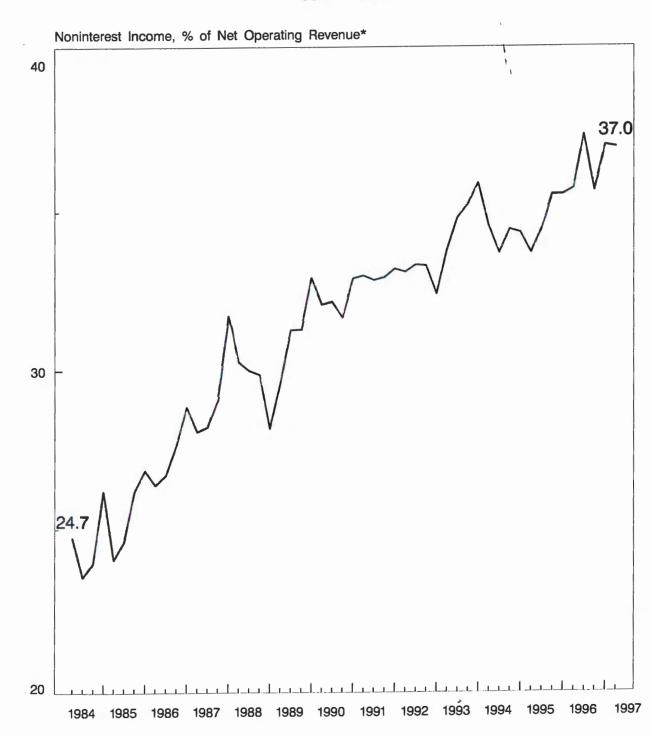

Quarterly Net Interest Margins, Annualized

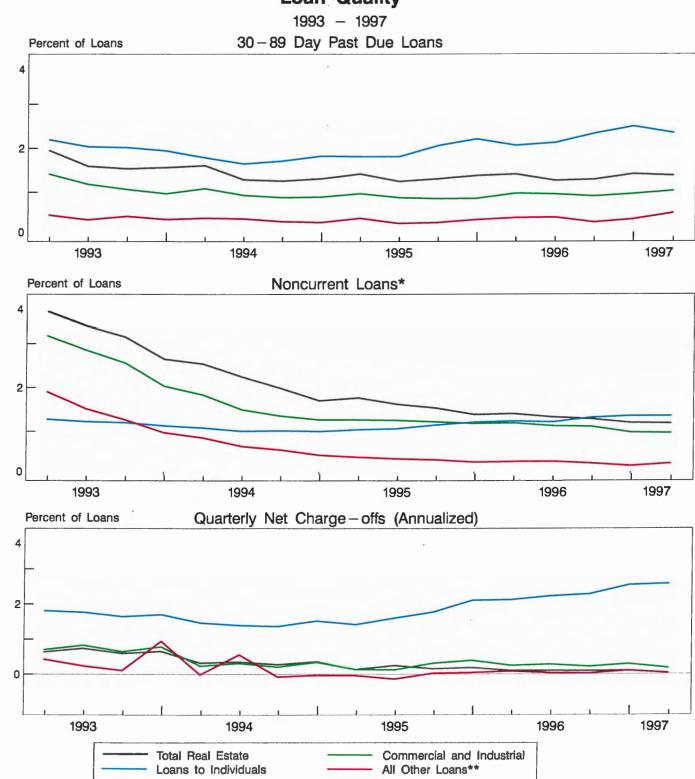

Noninterest Income Provides a Growing Proportion of Bank Revenue

1984 - 1997

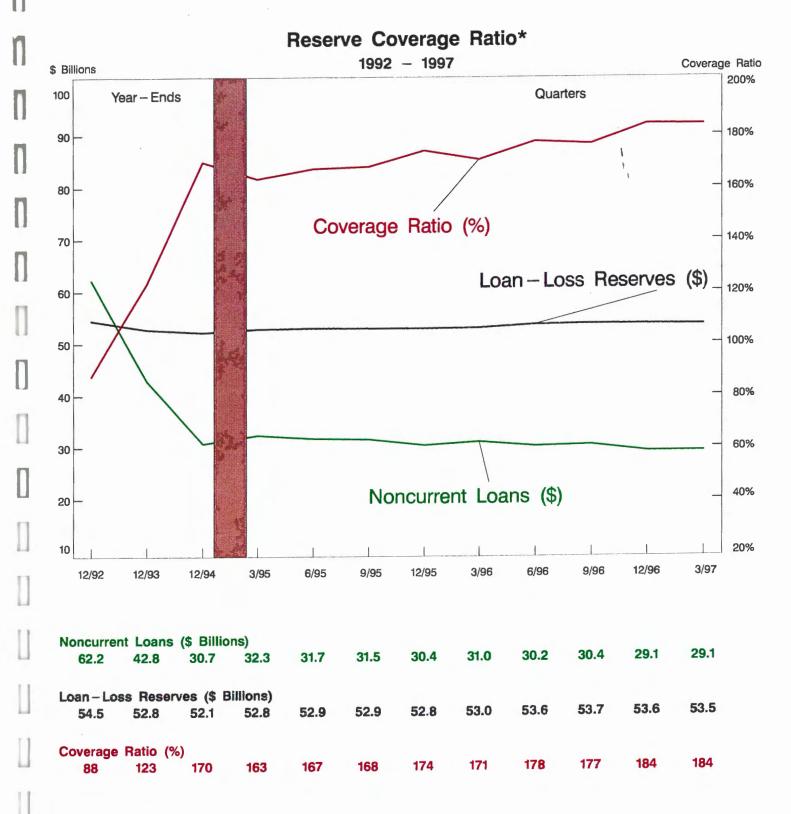

^{*}Net operating revenue equals net interest income plus noninterest income.

Loan Quality

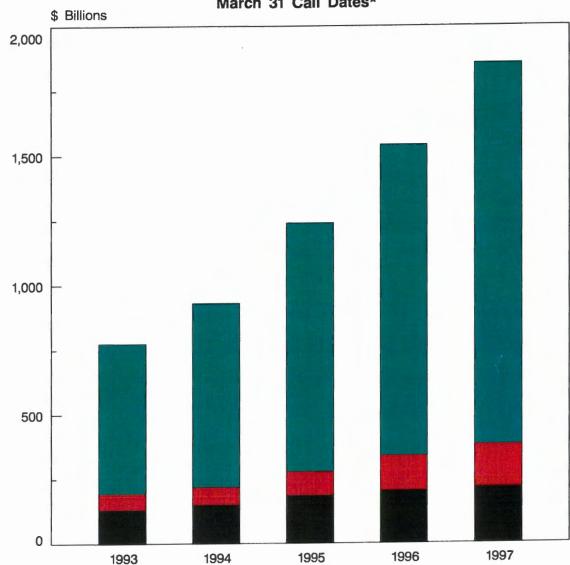

^{*}Loans past due 90 or more days or in nonaccrual status.

^{**}Includes loans to foreign governments, depository institutions and lease receivables.

^{*}Loan-loss reserves to noncurrent loans.

*YTD ROA minus ROA for the same period one year ago equals change in basis points. Basis point=1/100 of a percent. Results for four of the states with the highest ROAs (SD, NV, DE, & NH) were significantly influenced by the presence of large credit card operations.

Credit Risk Diversification

Consumer Loans versus Loans to Commercial Borrowers (as a % of Total Loans)

Loans (\$ Billions):

Commercial Borrowers	\$1,268	\$1,320	\$1,192	\$1,308	\$1,599	\$1,569
Consumer Loans	680	804	849	1.056	1 217	1.209

Loans to Commercial Borrowers (Credit Risk Concentrated) — These are loans that can have relatively large balances at risk to a single borrower. A single loan may represent a significant portion of an institution's capital or income. Therefore, a relatively small number of defaults could impair an institution's capital or income. These loans include commercial and industrial loans, commercial real estate, construction loans, and agricultural loans.

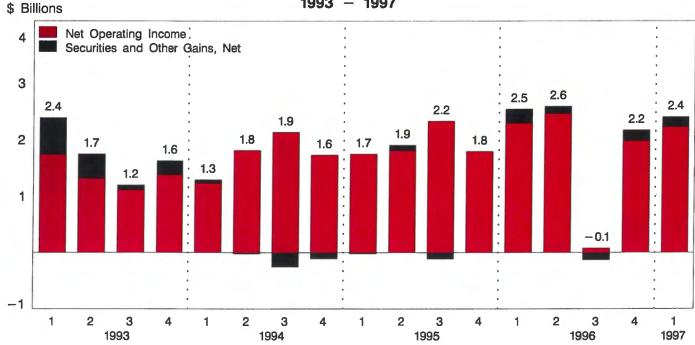

Consumer Loans (Credit Risk Diversified) – These are loans that typically have relatively small balances spread among a large number of borrowers. A number of defaults are likely but typically do not impair an institution's capital or income. These loans include consumer and credit card loans, 1–4 family residential mortgages and home equity loans.

FDIC - Insured Savings Institutions

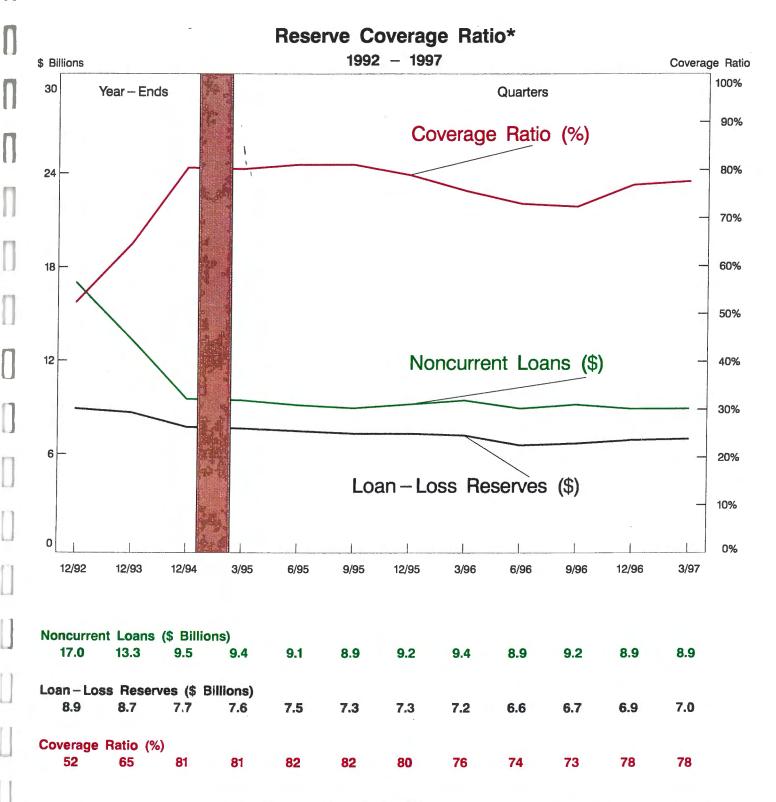

Quarterly Net Income

1993 - 1997

Quarterly Net Interest Margins, Annualized

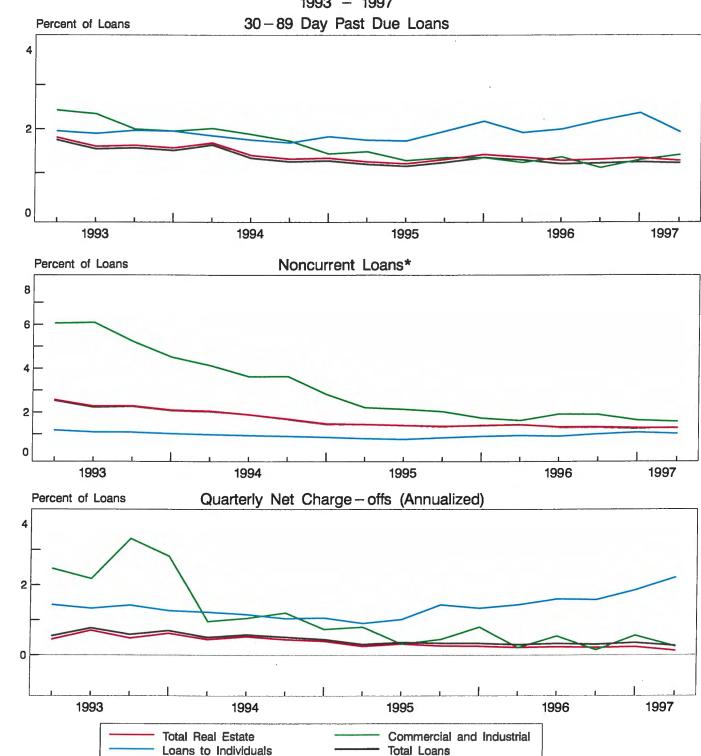

^{*}Loan-loss reserves to noncurrent loans. Beginning with June 1996, TFR filers report noncurrent loans net of specific reserves. Accordingly, specific reserves have been subtracted from loan-loss reserves, beginning with June 1996, to make the coverage ratio more closely comparable to prior periods.

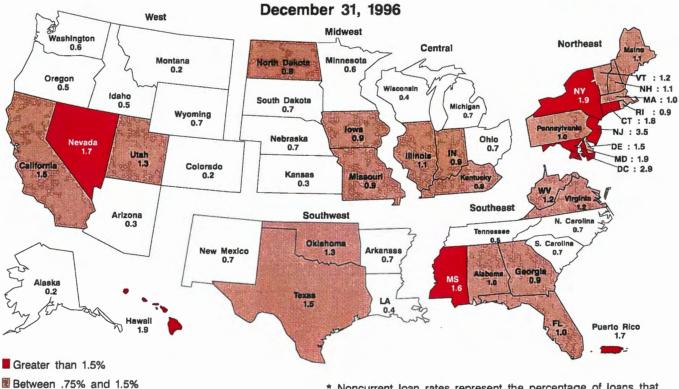

Loan Quality

1993 - 1997

Troubled Real Estate Asset Rates*

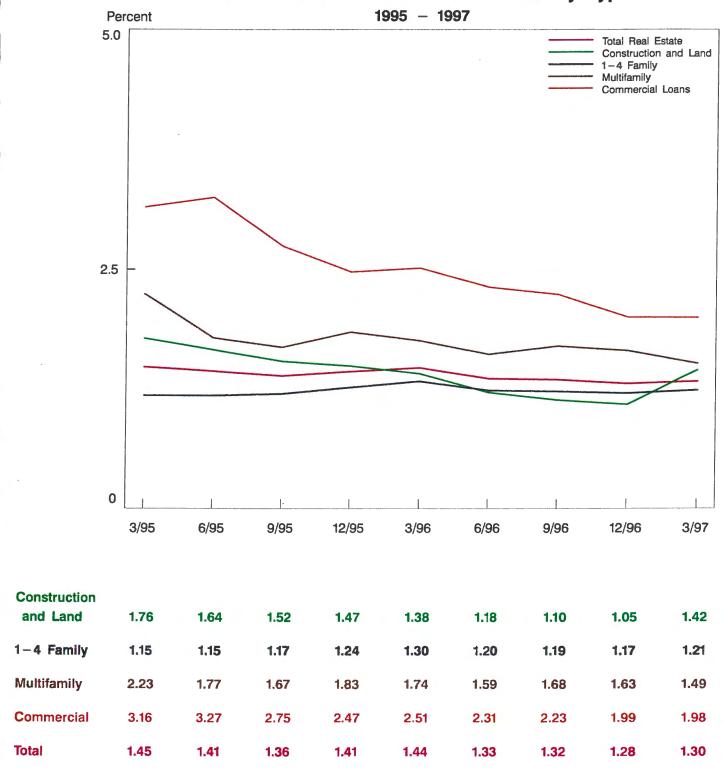

^{*}Loans secured by real estate past due 90 days or more or in nonaccrual status plus other real estate owned (OREO) as a percent of total real estate loans plus OREO.

Noncurrent Real Estate Loan Rates*

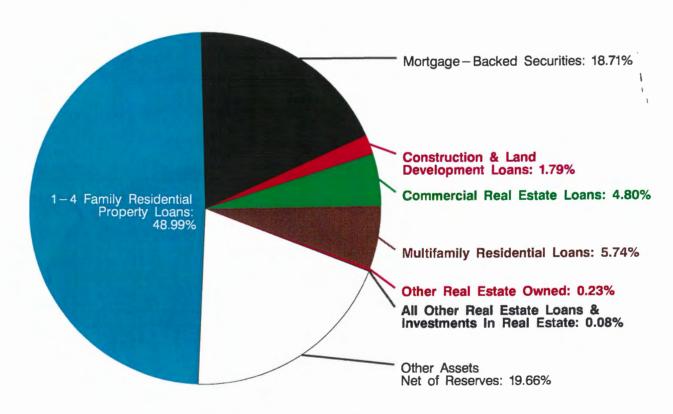

^{*}Loans secured by real estate past due 90 days or more or in nonaccrual status as a percent of total real estate loans.

Noncurrent Real Estate Loan Rates by Type*

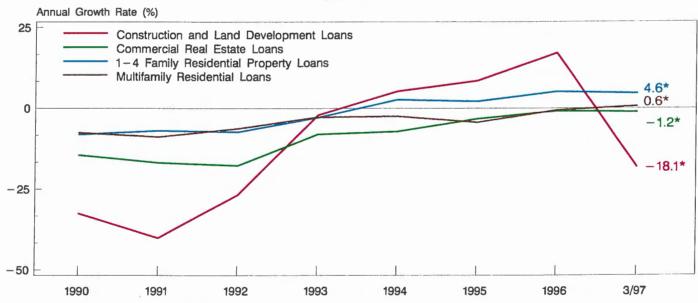

^{*}Noncurrent loan rates represent the percentage of loans in each category that are past due 90 days or more or in nonaccrual status.

Real Estate Assets as a Percent of Total Assets March 31, 1997

Real Estate Loan Growth Rates

1990 - 1997

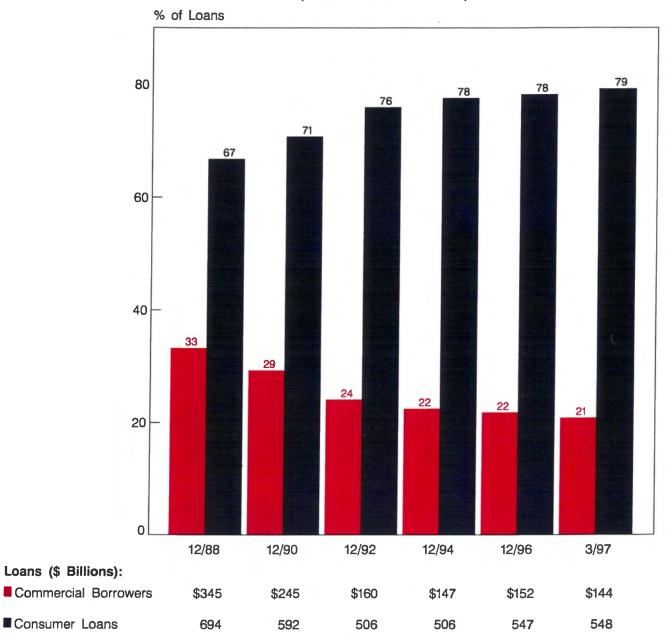

^{*}Growth rate for most recent twelve-month period.

Beginning in March 1997, TFR filers report balances net of loans in process.

Credit Risk Diversification

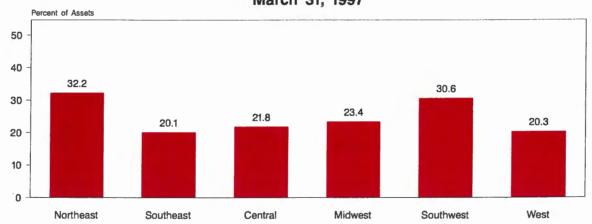

Consumer Loans versus Loans to Commercial Borrowers (as a % of Total Loans)

Loans to Commercial Borrowers (Credit Risk Concentrated) — These are loans that can have relatively large balances at risk to a single borrower. A single loan may represent a significant portion of an institution's capital or income. Therefore, a relatively small number of defaults could impair an institution's capital or income. These loans include commercial and industrial loans, commercial real estate, construction loans, and agricultural loans.

Consumer Loans (Credit Risk Diversified) – These are loans that typically have relatively small balances spread among a large number of borrowers. A number of defaults are likely but typically do not impair an institution's capital or income. These loans include consumer and credit card loans, 1–4 family residential mortgages and home equity loans.

NOTES TO USERS

This publication contains financial data and other information for depository institutions insured by the Federal Deposit Insurance Corporation (FDIC). These notes are an integral part of this publication and provide information regarding the comparability of source data and reporting differences over time. The information presented in the FDIC Quarterly Banking Profile is divided into the following groups of institutions:

FDIC-Insured Commercial Banks

This section covers commercial banks insured by the FDIC either through the Bank Insurance Fund (BIF) or through the Savings Association Insurance Fund (SAIF). These institutions are regulated by and submit financial reports to one of the three federal commercial bank regulators (the Board of Governors of the Federal Reserve System, the FDIC or the Office of the Comptroller of the Currency).

FDIC-Insured Savings Institutions

This section covers savings institutions insured by either BIF or SAIF that operate under state or federal banking codes applicable to thrift institutions, except for one self-liquidating institution primarily funded by the FSLIC Resolution Fund (FRF). Savings institutions in Resolution Trust Corporation conservatorships are also excluded from these tables while in conservatorship. The institutions covered in this section are regulated by and submit financial reports to one of two Federal regulators—the FDIC or the Office of Thrift Supervision (OTS).

FDIC-Insured Institutions by Insurance Fund

Summary balance-sheet and earnings data are provided for commercial banks and savings institutions according to insurance fund membership. BIF-member institutions may acquire SAIF-insured deposits, resulting in institutions with some deposits covered by both insurance funds. Also, SAIF members may acquire BIF-insured deposits. The insurance fund membership does not necessarily reflect which fund insures the largest percentage of an institution's deposits. Therefore, the BIF-member and the SAIFmember tables each include deposits from both insurance funds. Depository institutions that are not insured by the FDIC through either the BIF or SAIF are not included in the FDIC Quarterly Banking Profile. U.S. branches of institutions headquartered in foreign countries and non-deposit trust companies are not included unless otherwise indicated. Efforts are made to obtain financial reports for all active institutions. However, in some cases, final financial reports are not available for institutions that have closed or converted their charter.

DATA SOURCES

The financial information appearing in this publication is obtained primarily from the Federal Financial Institutions Examination Council (FFIEC) Call Reports and the OTS Thrift Financial Reports submitted by all FDIC-insured depository institutions. This information is stored on and retrieved from the FDIC's Research Information System (RIS) data base.

COMPUTATION METHODOLOGY

Certain adjustments are made to the OTS Thrift Financial Reports to provide closer conformance with the reporting and accounting requirements of the FFIEC Call Reports. Beginning in March 1997, both Thrift Financial Reports and Call Reports are completed on a fully consolidated basis. Previously, the consolidation of subsidiary depository institutions was prohibited. All other subsidiaries were reported on an equity or cost basis. Now, parent institutions file consolidated reports, while their subsidiary financial institutions continue to file separate reports. Data from subsidiary institution reports are included in the Quarterly Banking Profile tables, which can lead to double-counting. No adjustments are made for any double-counting of subsidiary data.

All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginning-of-period amount plus end-of-period amount plus any interim periods, divided

by the total number of periods). For "pooling-of-interest" mergers, the assets of the acquired institution(s) are included in average assets since the year-to-date income includes the results of all merged institutions. No adjustments are made for "purchase accounting" mergers. Growth rates represent the percentage change over a 12-month period in totals for institutions in the base period to totals for institutions in the current period. Tables III and IV do not provide growth rates for the "Asset Size Distribution" since many institutions migrate between size groups.

All data are collected and presented based on the location of each reporting institution's main office. Reported data may include assets and liabilities located outside of the reporting institution's home state. Also, when a main office is relocated to another region, no adjustments are made to regional growth rates. In addition, institutions may change their charters, resulting in an interindustry migration, e.g., savings institutions can convert to commercial banks or commercial banks may convert to savings institutions. These situations can affect state and regional statistics.

RECENT ACCOUNTING CHANGES

Adoption of GAAP Reporting. Effective with the March 31, 1997 Call Reports, generally accepted accounting principles (GAAP) were adopted as the reporting basis for the balance sheet, income statement and supporting schedules. New reporting instructions changed the amounts reported for a number of items used in the Quarterly Banking Profile, so that comparability with prior periods may be affected. Among the items most significantly affected by the new reporting rules are: loans & leases, reserve for losses, goodwill and other intangibles, all other assets and equity capital. More information on changes to the March 31, 1997 Call Report is contained in Financial Institution Letter FIL-27-97, which is available through the FDIC World Wide Web site at www.fdic.gov/banknews/fils/fil9727.html, or from the FDIC Public Information Center, 801 17th St., NW, Washington, DC 20434; telephone (202) 416-6940. Information on changes to the March 31, 1997 Thrift Financial Reports is available from the Office of Thrift Supervision, 1700 G St., NW, Washington, DC 20552; telephone (202) 906-6677.

Subchapter S Corporations. The Small Business Job Protection Act of 1996 changed the Internal Revenue Code to allow financial institutions to elect Subchapter S corporation status, beginning in 1997. S corporations can pass tax liabilities directly to shareholders; this can have the effect of reducing institutions' reported taxes and increasing their after-tax earnings.

The election of Subchapter S status may result in an increase in shareholders' personal tax liability. Therefore, some S corporations may increase the amount of earnings distributed as dividends to compensate for higher personal taxes.

DEFINITIONS (in alphabetical order)

BIF-insured deposits (estimated) — the amount of deposits in accounts of less than \$100,000 insured by the BIF. For SAIF-member "Oakar" institutions, it represents the adjusted attributable amount acquired from BIF members.

Capital category distribution — each institution's capital category is calculated or estimated from its financial report and does not reflect supervisory upgrades or downgrades:

	Tota!		Tier 1				
	Risk-Base	ed R	isk-Base	ed	Tier 1		Tangible
(Percent)	Capital	•	Capital	• Le	everag	е	Equity
Well-capitalized	≥10	and	≥6	and	≥5		-
Adequately capitaliz	ed ≥8	and	≥4	and	≥4		_
Undercapitalized	≥6	and	≥3	and	≥3		_
Significantly undercapitalized	<6	or	<3	or	<3	and	>2
Critically undercapitalized	_		_		_		≤2

^{*}As a percentage of risk-weighted assets.

Construction and development loans — includes loans for all property types under construction, as well as loans for land acquisition and development.

Derivative contracts, gross fair values (positive/negative) — are reported separately and represent the amount at which a contract could be exchanged in a transaction between willing parties, other than in a forced or liquidation sale. If a quoted market price is available for a contract, the fair value reported for that contract is calculated using this market price. If quoted market prices are not available, the reporting banks use the best estimate of fair value based on quoted market prices of similar contracts or on valuation techniques such as discounted cash flows. This information is reported only by banks with assets greater than \$100 million.

Loans secured by real estate — includes home equity loans, junior liens secured by 1-4 family residential properties and all other loans secured by real estate.

Loans to individuals — includes outstanding credit card balances and other secured and unsecured consumer loans.

Mortgage-backed securities — certificates of participation in pools of residential mortgages and collateralized mortgage obligations issued or guaranteed by government-sponsored or private enterprises. Also, see "Securities", below.

Net charge-offs — total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off.

Net interest margin — the difference between interest and dividends earned on interest-bearing assets and interest paid to depositors and other creditors, expressed as a percentage of average earning assets. No adjustments are made for interest income that is tax exempt.

Net operating income — income excluding discretionary transactions such as gains (or losses) on the sale of investment securities and extraordinary items. Income taxes subtracted from operating income have been adjusted to exclude the portion applicable to securities gains (or losses).

Noncurrent assets — the sum of loans, leases, debt securities and other assets that are 90 days or more past due, or in nonaccrual status.

Noncurrent loans & leases — the sum of loans and leases 90 days or more past due, and loans and leases in nonaccrual status.

Off-balance-sheet derivatives — represents the sum of the following: interest-rate contracts (defined as the notional value of interest-rate swap, futures, forward andoption contracts), foreign-exchange-rate contracts, commodity contracts and equity contracts (defined similarly to interest-rate contracts).

Futures and forward contracts — a contract in which the buyer agrees to purchase and the seller agrees to sell, at a specified future date, a specific quantity of underlying at a specified price or yield. These contracts exist for a variety of underlyings, including the traditional agricultural or physical commodities, as well as currencies and interest rates. Futures contracts are standardized and are traded on organized exchanges which set limits on counterparty credit exposure. Forward contracts do not have standardized terms and are traded over the counter.

Option contracts — a contract in which the buyer acquires the right to buy from or sell to another party some specified amount of underlying at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the underlying at the discretion of the buyer of the contract.

Swaps—an obligation between two parties to exchange a series of cash flows at periodic intervals (settlement dates), for a specified period. The cash flows of a swap are either fixed, or determined for each settlement date by multiplying the quantity of the underlying (notional principal) by specified reference rates or prices. Except for currency swaps, the notional principal is used to calculate each payment but is not exchanged.

Other real estate owned — primarily foreclosed property. Direct and indirect investments in real estate ventures are excluded. The amount is reflected net of valuation allowances. For institutions that file a *Thrift Financial Report (TFR)*, the valuation allowance subtracted also includes allowances for other repossessed assets. Also, for *TFR* filers the components of other real estate owned are reported gross of valuation allowances.

"Problem" institutions — Federal regulators assign a composite rating to each financial institution, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. "Problem" institutions are those institutions with financial, operational, or managerial weaknesses that threaten their continued financial viability. Depending upon the degree of nsk and supervisory concern, they are rated either a "4" or "5". For all BIF-member institutions, and for all SAIF-member institutions for which the FDIC is the primary federal regulator, FDIC composite ratings are used. For all SAIF-member institutions whose primary federal regulator is the OTS, the OTS composite rating is used.

Reserves for losses — the allowance for loan and lease losses and the allocated transfer risk reserve on a consolidated basis. Prior to March 31, 1997, institutions filing a *Thrift Financial Report (TFR)* included specific reserves, while *Call Report* filers included only general valuation allowances. Beginning March 31, 1997, *TFR* reporters net these specific reserves against each loan balance. Also beginning March 31, 1997, the allowance for off-balance-sheet credit exposures was moved to "Other liabilities"; previously, it had been included in the general valuation allowance.

Return on assets — net income (including gains or losses on securities and extraordinary items) as a percentage of average total assets. The basic yardstick of bank profitability.

Return on equity — net income (including gains or losses on securities and extraordinary items) as a percentage of average total equity capital.

Risk-weighted assets — assets adjusted for risk-based capital definitions which include on-balance-sheet as well as off-balance-sheet items multiplied by risk-weights that range from zero to 100 percent. A conversion factor is used to assign a balance sheet equivalent amount for selected off-balance-sheet accounts.

SAIF-insured deposits (estimated) — the amount of deposits in accounts of less than \$100,000 insured by the SAIF. For BIF-member "Oakar" institutions, it represents the adjusted attributable amount acquired from SAIF members.

Securities — excludes securities held in trading accounts. Banks' securities portfolios consist of securities designated as "held-to-maturity", which are reported at amortized cost (book value), and securities designated as "available-for-sale", reported at fair (market) value.

Troubled real estate asset rate — noncurrent real estate loans plus other real estate owned as a percent of total real estate loans and other real estate owned.
